MARKET REVIEW

Bond yields rose at the start of the year, with stronger-than-expected data on growth and inflation leading market participants to reduce interest rate cut expectations. These expectations are broadly in line with guidance from central banks, despite their increased volatility.

The US Federal Reserve also maintained its benchmark interest rate at 5.5%, unchanged since July. Although policymakers are changing their stance on the path of interest rates, officials are less decisive on the timing of forecast cuts and remain data dependent. The European Central Bank's Governing Council kept monetary policy unchanged but revised down its estimates of growth and inflation, in what was perceived as a shift away from its previous hawkish stance. The Bank of England held its benchmark interest rate at 5.25% while noting the need for monetary policy to be restrictive for an extended period.

Credit risk premia declined over the quarter, with lower-rated debt continuing to rally as compared to higher quality securities and in line with improved risk sentiment. Shorter maturity corporate debt, notably financials, outperformed sovereign debt over the quarter.

PERFORMANCE & ACTIVITY

The Global Impact Bond Fund's total return of 0.2% outperformed that of its iBoxx Global Green, Social, Sustainability Index benchmark (-0.9%) over the period under review. The Fund's overweight sterling duration proved beneficial to performance, aided by some favourable credit selection in the latter part of the period under review.

While the Fund's increased exposures to lower-beta quasi-government debt initially underperformed lower-rated corporates, its financials sector holdings contributed positively to performance as risky assets gained. Higher-beta credit such as subordinated financials continued to gain from credit spread tightening as sentiment towards risky assets improved. Over the quarter, the Fund added new positions in United Utilities 3.75% 2034 green bond and green hybrids of Orsted 5.125%. It also sold SSE 1.5% 2028 and Nokia 4.375% 2027 with the proceeds being re-invested.

Q1 2024 Commentary

OUTLOOK

While global central bankers are now firmly signalling looser monetary policy for the months ahead and acknowledge we are at or near the peak of interest rates, the timing of suggested changes remains particularly volatile and sensitive to incoming economic data. Progress on the deceleration of headline inflation contrasts with robust growth and tight labour markets. In the near term, this is prompting a reassessment of how restrictive financial conditions actually are. It also limits the urgency with which policymakers may enact supportive measures as further clarity is sought.

Survey data on economic growth is not only stronger than expected but also reflective of a rebound that is gaining momentum. It highlights upside risks to inflation. Employment has shown noteworthy resilience too, albeit with nominal wages declining. Further falls in services inflation are likely though. Geopolitical uncertainty remains a significant risk for the rest of the year, notably as we approach key leadership contests. An overall benign outlook for corporate defaults prevails despite sector-specific weakness such as in commercial real estate, where the combination of higher interest rates and lower occupancy levels is adversely impacting property valuations. The ability of heavily indebted issuers to refinance their debt is being tested as well, with some speculative grade borrowers now struggling to clear this hurdle without a restructuring. We continue to see a cautious stance towards lower-rated and 'higher-beta' assets as crucial, along with a bias towards higher quality debt.

We therefore remain vigilant in seeking out opportunities to add to high quality credits, scrutinising the robustness of business models and cash flows to ensure adequate compensation for risk. Our investment approach continues to focus on good quality credits that offer attractive yields.

PERFORMANCE DISCRETE	12 Months to 31/03/2020	12 Months to 31/03/2021	12 Months to 31/03/2022	12 Months to 31/03/2023	12 Months to 31/03/2024
Fund (B Class)				-7.5%	6.0%

Past performance is not necessarily a guide to future returns.

*Inception Date 24th January 2022

**This benchmark is a comparator against which the overall performance of the fund can be measured. It has been chosen based on the Fund's multi-currency portfolio of debt instruments, the bulk of which possess a clear use of proceeds and as such are labelled Green, Social and or Sustainable. The portfolio manager is not bound or influenced by the index when making investment decisions and the fund's holdings may deviate from the benchmarks constituents.

***The Distribution Yield reflects the amounts that may be expected to be distributed over the next 12 months as a percentage of the mid-market share price of the Fund as at the date shown. The Underlying Yield reflects the annualised income net of expenses of the Fund (calculated in accordance with the relevant accounting standards) as a percentage of the midmarket share price of the Fund as at the date shown. Both Yields are based on a snapshot of the portfolio on that day. The yields do not include any preliminary charge and investors may be subject to tax on distributions. The Distribution Yield is higher than the Underlying Yield because the Fund's expenses are charged to capital. This has the effect of increasing the distributions for the year and constraining the Fund's capital performance to an equivalent extent. The Historic Yield reflects distributions declared over the past twelve months as a percentage of the share price.
